

# OUR PRACTICE NOW PROVIDES GUIDED BIOFILM THERAPY® GBT

## WHAT IS GBT?

Guided Biofilm Therapy (GBT) is a state-of-the-art technology that completely removes biofilm, discolorations, and calculus.

GBT uses innovative technologies while being gentle on the tooth surfaces and gums.

GBT is a painless, fast, and safe method that helps you keep your teeth healthy. GBT also supports your overall health for a lifetime.

✔ We'll assess your oral health and discuss the impact that may have on your overall health.

✔ We'll apply a special bacterial stain to reveal areas where bacteria may be lurking around your teeth and gums.

✔ While we make those bacteria visible, we'll also provide you with expert tips on how to brush and clean between your teeth effectively, boosting your oral health.

✔ We'll use AIRFLOW®, a cutting-edge method that combines air, fine powder, and warm water to whisk away those stained bacteria, leaving your teeth and gums refreshed.

✔ No more uncomfortable vibrations! We'll use PIEZON® PS No Pain piezoceramic instruments to delicately remove hard deposits.

✔ Our goal is crystal-clear: eliminate all bacteria and stains during your treatment.
